Competition Picks Up in SASE; Downgrade to EW

WHAT'S CHANGED

Zscaler Inc (ZS.O)	From	To
Rating	Overweight	Equal-weight
Price Target	\$200.00	\$155.00

We are moving to EW on ZS, as the prior OW thesis around platform expansion has not shown enough traction, while SASE market has become more competitive. The thesis has largely played out, with ZS now a popular short among investors, but we don't see a positive catalyst to reverse sentiment in NT.

Key Takeaways

- Move to OW last year predicated on company emerging into more of a platform story; contribution outside of ZIA/ZPA remains small, causing us to move to EW.
- Picking up on more competition in the SASE space, as the high-end enterprise market becomes more brownfield, a challenge to pricing.
- Given investor sentiment, with ZS already down 35%+ YTD, more than cyber stocks in general, thesis has partially played out, a reason we are not more negative.
- Could see some squeeze on FQ3 results given negative investor sentiment, but see minimal sources of upward surprise on FY27 guide (July FYE), keeping us EW.

Platform Expansion Still Early, Core ZIA/ZPA Remains the Growth Engine. When we upgraded ZS to OW last year, we did so on the view that ZS could expand its platform, emerging as a third major platform vendor through the Red Canary acquisition, data security and digital experience (ZDX). While we have seen early traction here, with ZDX bookings up 80% Y/Y to \$100mm ARR, we have not yet seen similar traction with Red Canary (as the company looks to incorporate capabilities into Zero Trust Exchange), making it difficult to see the platform story really playing out for now. That puts focus squarely on ZIA/ZPA, which are growing in the mid-teens Y/Y, challenging the ability to sustain 20%+ growth rate once Red Canary becomes inorganic in FY27. With the stock down 35%+ YTD, greater than the security average at ~24%, we acknowledge the market has already priced in this more cautious view. However, without a material positive catalyst in the near term, we are stepping to the sidelines.

SASE Opportunity Intact, but Execution Becoming More Complex. Zscaler remains a clear category leader in Zero Trust and Secure Service Edge (SSE), with exposure to one of the key secular trends in cybersecurity: Secure Access Service Edge (SASE). While long-term demand remains robust, the path to growth re-acceleration and monetization across the broader platform is proving more complex

than initially expected. SASE transformations are increasingly large, multi-year infrastructure projects that require coordination across networking, security, and IT teams, resulting in elongated sales cycles. At the same time, intensifying competitive dynamics, especially as customers evaluate broader platform vendors with deeper networking capabilities, may be creating incremental friction in large enterprise deals. With more of the market brownfield vs. greenfield at this point, particularly in large enterprise, we see pricing competition stepping up.

Incremental Headwinds: Red Canary and SBC Add Pressure to Growth Quality.

We flag two factors that are adding additional complexity to Zscaler's near-term growth profile: **First**, the Red Canary acquisition, while strategically aligned with the company's push into AI-driven SecOps, introduces a less favorable revenue dynamic given the inherently higher churn profile of the MDR market. As a result, near-term contribution is expected to be modest (NNARR of ~\$6mn in Q3 / \$10mn in Q4), with limited net new ARR and the potential to act as a slight drag on overall growth.

Second, elevated stock-based compensation (SBC) remains a key point of investor focus based on our latest conversations. While necessary to support ongoing investment in newer growth areas, higher SBC levels continue to pressure GAAP profitability and dilute the perceived quality of earnings. Taken together, these dynamics highlight a growing distinction between top-line growth and underlying growth quality, reinforcing a more measured view on the sustainability and durability of Zscaler's financial profile in the near-term.

Valuation Reset, but Limited Near-Term Catalyst for Re-Rating. From a valuation perspective, the stock has reset meaningfully (down ~35% YTD), with Zscaler now trading at ~5x CY27E revenue and ~19x CY27E FCF, below high-growth SaaS and security peers. While fairly cheap on a relative basis today, we see limited visibility into near-term upward estimate revisions, especially as growth is stabilizing in the low-20% range, and newer product areas are still ramping. We view Zscaler as cheap, but not yet compelling. The company remains well-positioned for long-term growth given its leadership in Zero Trust and exposure to SASE and AI-driven security trends. However, the combination of execution complexity, limited meaningful growth drivers, early-stage monetization of new products, and limited catalysts for near-term estimate revisions supports a more balanced risk/reward, in our view.

Downgrading to EW from OW, PT Lowered to \$155. We lower our PT to \$155 from \$200, now derived off a 23x EV/FCF multiple on \$1.45bn CY28 FCF (vs. prior 32x), discounted back at ~12%. Our multiple is largely inline with the high-growth SaaS / cybersecurity peer average and implies 5.3x 2027 EV/Sales, also largely inline with security peers with similar growth profiles. Our bull case valuation is similarly lowered to \$216 from \$312, now derived off a 30x EV/FCF multiple on \$1.57bn CY28 FCF (vs. prior 45x), given less bullish view on forward growth prospects and valuation re-rating, which implies 7.4x EV/CY27 Sales. Our bear case valuation of \$100 accounts for 15x CY28 FCF (from 18x) based on potential for additional pressure on organic core growth over the next few years. Upside risks to our PT include an acceleration in cybersecurity spend and better competitive dynamics. Downside risks to our PT include increased competitive pressure from larger vendors, particularly Palo Alto Networks, as well as longer sales cycles due to the

transformational nature of ZS's offering.

Risk Reward – Zscaler Inc (ZS.O)

Modernizing Security Architectures For The Cloud... But Intensifying Competition

PRICE TARGET \$155.00

Derived from 23x CY28 FCF, a slight premium to Security software peers, given durability of SASE spend vs other more cyclical areas within Security, discounted back at a 12.1% discount rate.

EQUAL-WEIGHT THESIS

- Zscaler's cloud-native security solution is well positioned to help enterprises modernize their network security architectures.
- Zscaler should benefit from better sales rep productivity nearer-term
- Zscaler's longer-term secular growth story remains strong, especially as the company continues to build more of a platform offering across multiple areas of the security stack beyond core network security over the next few years. However, these newer areas remain nascent relative to the total business and are unlikely to drive growth in the near-term, while the core business has seen growth decelerate in recent quarters as well. Altogether, these factors suggest limited growth upside in the NT.

Risk Reward Themes

Secular Growth: *Positive*

View descriptions of Risk Rewards Themes [here](#)

BULL CASE \$216.00

30x Bull Case CY28 FCF of \$1,569M

Zscaler garners a leading market position within web security and captures more of the full network security stack (>\$20B in annual spend today). This drives revenue CAGR of 24% through CY28, with operating margin expanding to 25% on greater revenue scale. Applying a 30x multiple to our estimated CY28 FCF of \$1.6B yields our bull case DCF value of \$216, after discounting back at 12.1% WACC.

BASE CASE \$155.00

23X Base Case CY28 FCF of \$1,453M

Our base case for ZS assumes that the company grows at a 23% CAGR over the next 5 years to reach revenue of \$5.3B in CY28. Slightly improving unit economics drive op margins from 18% in CY23 to 24% in CY28e and FCF of \$1.45B. Applying a 23X EV/FCF multiple against our CY28 estimate and discounting back at 12.1% drives our \$155 Base Case.

BEAR CASE \$100.00

15X Bear Case CY28 FCF of \$1,333M

Zscaler faces intensifying competition from larger network security vendors, while the company's efforts to expand meaningfully in network security fail to materialize. Growth slows faster than expected to 22% rev CAGR through CY28, and Zscaler exits CY28 with 22% operating margin. Given the lower growth profile, ZS trades at 15x EV/FCF in CY28, yielding \$100/share, assuming a 12.1% discount rate.

Risk Reward – Zscaler Inc (ZS.O)

KEY EARNINGS INPUTS

Key Debates

Growth Beyond Core (ZIA/ZPA) Lacking Traction. Zscaler's core products, namely Zscaler Internet Access (ZIA) and Zscaler Private Access (ZPA), remain the foundation of the business, with ARR growing in the mid-teens YoY and supported by a large installed base and durable upsell opportunity. This compares to ~21% YoY organic ARR growth for the broader business in the latest quarter, implying that incremental growth is increasingly dependent on newer product areas. However, growth beyond the core into adjacent areas (data protection, digital experience (ZDX), AI security) has been more mixed thus far. While the company has made deliberate investments to expand its platform through acquisitions of Red Canary and SPLX (2025), Avalor and Airgap (2024), and Canonic Security (2023), the incremental contribution from these areas remains in the early innings (ex-Red Canary) and is not yet driving a significant portion of overall growth. Though we believe the strategy has potential to be proven out longer-term, signs of improving customer attach / monetization within these areas remains fairly nascent. There are clear signs of progress and these areas remain key cross-sell opportunities over the longer-term. Newer offerings such as Data Security Everywhere and ZDX are gaining traction, with data security benefiting from consolidation of point products and ZDX bookings growing >80% YoY to >\$100mn in the LTM. Additionally, non-seat-based, consumption-based offerings are scaling quickly, now representing >25% of new ACV, with the associated ARR growing >100% YoY. These trends point to a broader monetization model beyond the core seat-based model over time (as discussed further below), particularly as AI-driven workloads increase traffic and consumption.

Looking ahead, Zscaler is positioning more of the business around the 'Data Everywhere' and 'AI Everywhere' as the next key legs of growth. On the positive side, AI security in particular represents a large TAM expansion opportunity, and we view SASE as one of the more defensible areas from potential AI-native disruption risk within security (see [AI-Natives: Challengers, or Creating Challenges, for Cyber \(20 Apr 2026\)](#)), with enterprises rapidly adopting AI and creating the attack surface constantly expanding. However, management commentary and our latest survey data suggest these opportunities remain in early innings, and often start as smaller deployments that will hopefully expand over time. AI security deployments, for example, often begin with visibility and governance use cases and scale gradually over time, resulting in smaller initial deal sizes and longer monetization cycles. As such, while these vectors are strategically important, they do not yet represent meaningful needle-movers to the overall growth algorithm for Zscaler.

SASE: Large Opportunity, But Largely Brownfield and Increasingly Complex to Execute. Secure Access Service Edge (SASE) remains one of the most important secular growth vectors in cybersecurity, driven by the shift toward cloud-first architectures and distributed workforces (expected to grow at 24% CAGR through 2028; see [Exhibit 1](#)). Gartner forecasts also point to strong SASE adoption trends going forward, with penetration to increase from ~14% of enterprises today to ~47% by 2027, reflecting a structural shift away from legacy, perimeter-based architectures towards more user- and application-centric security models, and implying a meaningful multi-year tailwind for vendors in the space. **However, the reality seems to be that SASE transformations are**

large, multi-year projects which often require ripping and replacing core networking infrastructure, leading to elongated sales cycles and heavier scrutiny on ROI. Further, the growth opportunity within SASE is more brownfield than greenfield, as most deployments involve displacing entrenched legacy networking and security infrastructure rather than enabling entirely new use cases.

Unlike typical point-product security purchases, SASE deals tend to involve multiple stakeholders across networking, security, and IT infrastructure teams, which drives longer sales cycles and increases deal friction. For Zscaler specifically, the challenge is compounded by the need to compete more directly with vendors that have stronger networking DNA (e.g., SD-WAN incumbents) or larger platform offerings (namely against PANW/CSCO/FTNT). In particular, while the company is a clear leader in Secure Service Edge (SSE), especially in Zero Trust Network Access (ZTNA), where Zscaler has leading market share, SASE evaluations often extend beyond security into networking capabilities (like SD-WAN, as mentioned). This brings Zscaler into more direct competition with vendors that have deeper networking heritage or broader platform offerings, including Cisco, Palo Alto Networks, and Fortinet. In certain cases, customers prefer more integrated networking + security stacks, which can create challenges for Zscaler in large enterprise bake-offs where incumbency and breadth matter. In our view, this is more of a long-term headwind that is especially unlikely to abate with the rise of new areas of the security stack (i.e., AI security).

Another layer of complexity is the evolving monetization model tied to SASE adoption for Zscaler. Historically, Zscaler's business has been largely seat-based, anchored around user access for ZIA/ZPA. However, as the company expands into broader SASE use cases covering branches, workloads, and increasingly AI agents, pricing is seemingly shifting towards more consumption-based models tied to usage (traffic, devices, and workloads). While this transition expands the long-term revenue opportunity (particularly as traffic scales with AI and cloud adoption), it may also introduce incremental complexity in how customers evaluate ROI and compare vendor offerings. In addition, the broader shift toward platform consolidation within cybersecurity is both a tailwind and a headwind for Zscaler. On one hand, SASE inherently benefits from consolidation trends, as customers look to reduce vendor sprawl and simplify policy enforcement across environments. On the other hand, platform consolidation often favors vendors with broader, more integrated portfolios across networking and security. This dynamic can work against Zscaler in certain scenarios, particularly when customers prioritize single-vendor solutions spanning firewall, SD-WAN, endpoint, and cloud security, areas where competitors like Palo Alto Networks, Cisco, and Fortinet have more encompassing offerings today.

Taken together, these dynamics suggest that while SASE remains a compelling and durable growth driver, the path to capturing this opportunity is increasingly tied to execution across complex, multi-year transformations. For Zscaler, success will depend not only on maintaining technical leadership in Zero Trust, but also on navigating competitive platform dynamics, evolving pricing models, platform expansion, and a potentially more measured pace of enterprise adoption.

Red Canary a Potential Growth Headwind? The Red Canary acquisition is strategically aligned with Zscaler's broader push into AI-driven security operations and the buildout of an 'agentic SOC,' but it introduces a more nuanced impact to near-term growth. While management has highlighted strong integration progress, namely around combining Red Canary's agentic AI capabilities with Zscaler's data fabric and telemetry, the financial contribution remains relatively modest and comes with some potential trade-offs. Importantly, Red Canary operates in the Managed Detection & Response (MDR) market, which carries inherently higher churn relative to Zscaler's core subscription business.

Management has explicitly noted elevated churn within the Red Canary base post-acquisition, reflecting both the nature of MDR services and differences in customer retention dynamics. As a result, while Red Canary is expected to contribute incremental ARR (~\$130mn in FY26), net new ARR contribution remains limited, with only modest sequential additions expected through the year (expected ~\$6mn in Q3 / \$10mn in Q4). ***In addition, the Red Canary customer base represents a different buyer profile than Zscaler's traditional platform customers as they are typically more services-oriented and focused on outsourced security outcomes rather than long-term platform standardization, which may limit expansion and monetization opportunities.*** Thus, there's a current dynamic where the Red Canary asset is strategically valuable and may prove out longer-term from a strategic perspective, but remains a less meaningful near-term growth driver.

On the growth side of the equation, the key risk is that incorporating Red Canary into the model may act as a slight drag on overall growth rates, particularly if renewal rates fall below expectations or if integration takes longer to translate into cross-sell opportunities. While Zscaler has indicated that the majority of Red Canary pipeline is now being driven from its existing customer base, which suggests some potential upsell opportunities, these benefits are likely to materialize gradually rather than immediately. More broadly, the acquisition reflects Zscaler's ongoing shift toward becoming a more comprehensive security platform, extending beyond user access into detection, response, and AI-driven SecOps. However, similar to other newer product areas, we flag potential execution risk. The integration of Red Canary into Zscaler's unified platform is still in the early innings, and the company still needs to demonstrate that it can both stabilize the acquired business (from a churn perspective) and successfully monetize it within the broader Zscaler ecosystem.

Net, while the Red Canary business enhances Zscaler's long-term platform positioning (AI security and SecOps), it also introduces a modest near-term headwind to growth and adds another layer of execution complexity at a time when investors are already focused on durability of underlying core growth and traction in other newer product areas.

Exhibit 4: Red Canary is One of the Technology Leaders in MDR Market and Further Builds Out Zscaler Platform Longer-Term, Though May Present Headwinds to Growth in the Next Few Quarters

SBC High Relative to Peers, Increasingly in Focus as Investors Focus More on GAAP

Metrics. Stock-based compensation (SBC) remains elevated for Zscaler relative to peers (see [Exhibit 5](#) & [Exhibit 6](#)), and is becoming a more prominent point of debate as investors increasingly focus on GAAP-based profitability / valuation frameworks. While high SBC has historically been more accepted across high-growth software, given signs of slowing organic core growth, investor appetite for high levels of SBC has declined, with capital discipline becoming a greater priority. From a Zscaler perspective, we flag two considerations: **First**, elevated SBC creates a meaningful gap between GAAP and non-GAAP profitability, which can obscure underlying earnings power. While the company generates strong free cash flow and operates with 20%+ non-GAAP operating margins, Zscaler's GAAP margins are significantly lower once stock-based compensation is added-back. This divergence becomes more relevant in an environment where investors are placing greater weight on 'true' profitability and earnings quality, particularly as growth moderates into the low-20% range (or sub-20%). **Second**, SBC contributes to ongoing

shareholder dilution, which can weigh on longer-term returns. As the company continues to invest in newer growth pillars like AI Security, Data Security, and broader platform expansion, equity compensation remains a key tool for attracting and retaining top talent. However, relative to peers with similar growth profiles, Zscaler's SBC intensity screens higher, which can pressure valuation when viewed through a GAAP lens or on a growth-adjusted basis.

Importantly, this dynamic is becoming more relevant as parts of the investor base shift toward GAAP-based valuation methodologies (e.g., GAAP operating income, GAAP EPS, or FCF adjusted for SBC). Under these frameworks, companies with higher SBC levels tend to appear less profitable and, in some cases, more expensive than their non-GAAP multiples would suggest. This creates a potential headwind for multiple expansion, even if underlying cash flow generation remains durable. Management has indicated a continued focus on balancing growth investments with margin discipline, yet there has been limited evidence of a sharp step-down in SBC as a percentage of revenue to date. As a result, SBC is likely to remain an overhang in the near term, particularly if growth continues to normalize and investors increasingly prioritize profitability quality alongside top-line performance. **Bottom line**, while SBC is not unique to Zscaler, its relative magnitude, coupled with a shifting investor focus toward GAAP metrics, adds another layer of scrutiny to the story and may constrain valuation upside without clearer progress on dilution and underlying GAAP margin expansion.

Source: Company Data, Morgan Stanley Research estimates, Visible Alpha

Exhibit 6: Stock-Based Compensation as % of Total Free Cash Flow

Source: Company Data, Morgan Stanley Research estimates, Visible Alpha

Valuation: Multiple has Reset Meaningfully, but Limited Visibility on Upward

Revisions. Zscaler's valuation has meaningfully reset, with the stock down 35%+ YTD, bringing multiples largely closer to the lower-end of high-growth SaaS and cybersecurity peers. Zscaler currently trades at ~5x our CY27e revenue and ~19x our CY27e FCF, representing a notable discount to both high-growth SaaS and security comps on an absolute basis (see [Exhibit 7](#)). As a result, the stock could be viewed as fairly inexpensive, however, while valuation has compressed, we see a more limited path to positive estimate revisions over the next few quarters. Current expectations already embed a relatively stable ~low-20% growth profile, and recent earnings commentary suggests that upside from newer vectors (AI security, data security, Zero Trust Everywhere) is still in the early innings and ramping gradually. At the same time, the core business (ZIA/ZPA) continues to grow in the mid-teens, implying limited near-term reacceleration without stronger platform cross-sell or a meaningful step-change in large deal conversion.

On a relative perspective, Zscaler trades at ~0.21x EV/Sales/G on CY27E, below both high-growth SaaS (~0.36x) and high-growth security peers (~0.45x). While this discount reflects some of the execution concerns discussed above (SASE complexity, platform traction, Red Canary dilution, SBC), it also suggests that much of the near-term risk is already reflected in the stock. Said differently, and supported by our latest investor conversations, valuation is not a key piece of the bear argument. That said, we believe multiple expansion from here is likely to be constrained without a clear catalyst for upward revisions. Historically, Zscaler has commanded a premium multiple due to its category leadership and durable growth profile. Today, with growth moderating and incremental drivers still in early days, the stock lacks a clear path to re-rating in the near term, in our view. Importantly, the valuation debate is increasingly shifting toward quality of growth and profitability. While Zscaler generates solid free cash flow (mid/high 20s% FCF margin), limited organic growth prospects, elevated SBC and a lack of clearly improving GAAP profitability likely continue to weigh on how investors see upside to valuation.

Overall, we view Zscaler as cheap, but not yet compelling. The stock's reset valuation provides downside support, but the lack of clear near-term catalysts for estimate revisions or multiple expansion tempers upside potential. This combination supports a more

balanced risk/reward and underpins our Equal-weight rating, rather than a more negative stance.

Why Netskope Still Overweight? We maintain an Overweight on Netskope, driven by a combination of faster top-line growth, a clearer path to margin expansion, and earlier-stage platform opportunity relative to Zscaler. While both companies are exposed to similar SASE and Zero Trust tailwinds, Netskope appears to be at a more attractive point in its growth and profitability curve, with multiple levers still in the early innings.

First, Netskope continues to demonstrate durably higher growth (albeit on a smaller scale), with revenue and ARR growing 32%/31% YoY in FY26 and ARR growth 31% YoY in the most recent quarter. This stands in contrast to Zscaler's low-20% growth profile, and importantly is being driven by both new logo wins and strong expansion within the installed base. Netskope's management has explicitly highlighted in recent calls that net new ARR growth is supported by a mix of new customer acquisition and upsell across existing accounts, with net retention rate at ~116%. This dual-engine growth model supports greater confidence in sustaining elevated growth relative to peers.

Second, Netskope is still in the early innings of platform expansion within its customer base, which provides a longer runway for durable growth. The average customer today uses ~4 products out of 20–25+ across the platform, highlighting significant greenfield for cross-sell. Management continues to emphasize that multiproduct adoption is a key driver of ARR growth, with 3+/4+/5+ module adoption reaching 75%/56%/39% in F4Q26, up from 73%/53%/37% in F3Q26, respectively, as well as a growing cohort of customers with 6+ modules. This is a critical distinction versus Zscaler, where platform expansion is more developed but also potentially closer to maturity, limiting incremental growth contribution in the near term.

Third, Netskope is earlier in its go-to-market and channel penetration opportunity, which likely provides incremental upside to growth. The company has been investing heavily in sales capacity, with a large cohort of reps hired over the past year still ramping and expected to contribute more meaningfully in F2H27. Netskope is also expanding its partner ecosystem, including GSIs and hyperscaler partnerships (e.g., Microsoft, AWS), which

could act as a force multiplier for customer acquisition and large enterprise deal flow. This stands in contrast to Zscaler, where go-to-market is more mature and incremental gains from sales capacity are likely more limited.

Bottom line, while Zscaler remains the incumbent leader in SASE, Netskope offers a more compelling combination of higher growth, earlier-stage platform expansion, improving margins, and incremental go-to-market upside over the NTM, while already pricing in more of a beaten-down multiple (more bearish scenario) from a valuation perspective, in our view. This supports a more favorable risk/reward profile at current levels and underpins our Overweight rating for Netskope.

Valuation Methodology and Risks

Netskope, Inc. (NTSK.O)

Applying a 24x multiple on our 2030 FCF drives our \$18 price target, which discounted back at 12%, implies an EV/CY27 sales multiple of ~7.5X, or ~0.34X growth-adjusted. This is a slight premium vs. primary peer ZS, which we view as reasonable given Netskope's 1) potential higher topline growth and 2) improving margin profile, despite the company's smaller revenue scale.

Risks to Upside

- NTSK sees accelerating customer adds and traction with its Netskope One platform across security, networking and analytics, which includes the replacement of network firewalls;
- Faster than expected traction with newer modules beyond core SASE/SSE

Risks to Downside

- Increased competitive pressure from larger vendors, particularly ZS and PANW
- Long sales cycles due to transformational nature of NTSK offering

An employee, director or consultant of Morgan Stanley is a director of Elastic NV, Tenable Holdings Inc. This person is not a research analyst or a member of a research analyst's household. Morgan Stanley & Co. LLC makes a market in the securities of Amplitude Inc., Appian Corp, Asana Inc, Autodesk, Blackline Inc, Box Inc, Check Point Software Technologies Ltd., Coursera, Inc., Docebo Inc., Five9 Inc, Freshworks Inc, HubSpot, Inc., LegalZoom.com Inc, Liveramp Holdings Inc, Manhattan Associates Inc., monday.com Ltd, PagerDuty, Inc., Qualys Inc, Rapid7 Inc, RingCentral Inc, Sabre Corp, Sprinklr Inc, Sprout Social Inc, SPS Commerce Inc, Tenable Holdings Inc, Twilio Inc, Udemy Inc, Varonis Systems, Inc., Vertex Inc., ZoomInfo Technologies Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of March 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1534	42%	461	50%	30%	698	43%
Equal-weight/Hold	1573	43%	372	40%	24%	716	44%
Not-Rated/Hold	4	0%	1	0%	25%	1	0%
Underweight/Sell	568	15%	89	10%	16%	209	13%
Total	3,679		923			1624	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the

appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
